UCLA, MASDS, STATS-418-S25

# How do you feel about the UCLA?

:Real Time Sentiment Analysis via Reddit data

Hochan Son

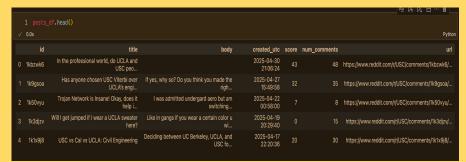

## **Objective**

- Building Real time Sentiment Analysis system
- What sentiments? {Like, Hate, Frustrated, Super or emojis}
- Scrape data from Reddit / Subreddit channels
- Rate Limits (only 1000 post from the current datetime)
- Scoring system
- Keyword to any social sentiment (i.e. USC, LA Olympic 2028, or Tariff)

## **EDA**

### - Subreddit Post (e.g. r/UCLA)

{id, title, body, created\_utc, score, num\_commend,rul}

#### - Post => Comments

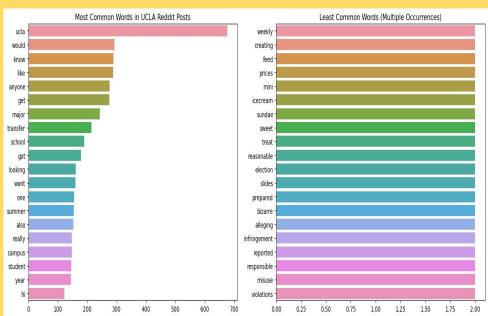

{comment\_id, post\_id, body\_score, created\_utc, parant\_id}

#### Most / Least used words

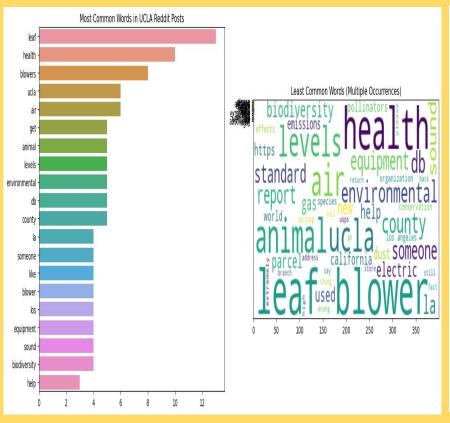

Most: {UCLA, would, know, like,.....}

Least: {weekly, creating, feed, prices, mini.....}

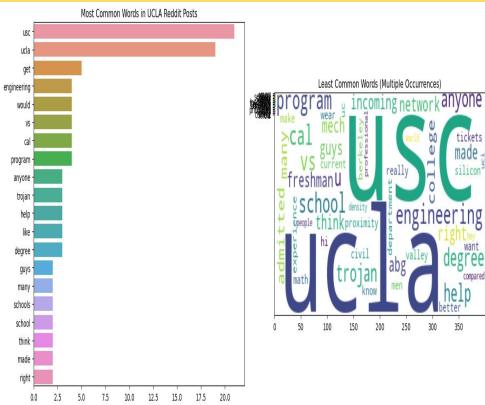

## **EDA - 2**

Subreddit Post (e.g. r/LosAngeles)

- Subreddit Post (e.g. r/USC)

## **Next Procedure**

- Classify the sentiment based on the context keywords {like, love, bad, aweful....}
- Final result will be based on scoring of the sentiments
- Use a lightweight Local LLM (i.e. Gemma3-2b, Bitnet-2b, or Tiny LM)
- Fine tune model to increase accuracy (optional)
- Implement in docker on Kubernetes (k3s) on Raspberry PI 4 (optional)
- Dashboard with interactive graph (optional)
